BusinessObjects Process Tracker

Visually map your business processes:

- Outline the steps in a business process
- Link associated reports and analytics to each step

Collaborate on your business processes:

- Assign owners to each milestone
- Add commentary to a business process

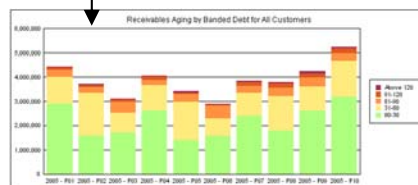

Proactively monitor your business processes:

- View color-coded cues that display the status of each action
- Indicate when tasks are complete

Align Business Intelligence with Business Processes

With many organizations starting to standardize their business intelligence (BI) systems, the availability of accurate corporate information is becoming pervasive. Yet most organizations still face the challenge of effectively using their BI content in real-world business scenarios. A chasm often exists between executing on a business process and consistently applying the available reports and analytics to that process. It's important to find a standard way to use BI effectively as part of a business process in order to ensure consistent, data-driven decision making.

Activity Name	Planned Start Date	Start Date	Planned End Date	End Date	Completed
Check Currency Revaluation Account	11/1/2005	10/1/2005	12/1/2005	12/1/2005	<input checked="" type="checkbox"/>
Review OL Accounts with Net Zero	12/1/2005	12/1/2005	14/1/2005	14/1/2005	<input checked="" type="checkbox"/>
Investigate Fixed Asset Revaluation Account	17/1/2005	18/1/2005	19/1/2005	20/1/2005	<input checked="" type="checkbox"/>
Investigate Losses on Disposal of Fixed Assets	20/1/2005	20/1/2005	21/1/2005	20/1/2005	<input checked="" type="checkbox"/>
Investigate Inactive POs More Than 90 days Old	24/1/2005	25/1/2005	26/1/2005	26/1/2005	<input checked="" type="checkbox"/>
Investigate PO Value in Excess of PR Value	26/1/2005	27/1/2005	28/1/2005	31/1/2005	<input checked="" type="checkbox"/>
Review All Manual Payments	26/1/2005		27/1/2005		<input type="checkbox"/>
Review Set Up Procedure for All New Suppliers	26/1/2005		27/1/2005		<input type="checkbox"/>

Map, track, and communicate a business process with links to relevant BI content.

BusinessObjects™ Process Tracker, a key innovation in BusinessObjects XI, helps organizations link BI content to their business processes for more consistent, proactive decision making. Using Process Tracker, organizations can visually map, track, and communicate a business process—such as a Sarbanes-Oxley compliance review, a product range review, or a vendor performance analysis—through a set of activities and their associated reports and analytics.

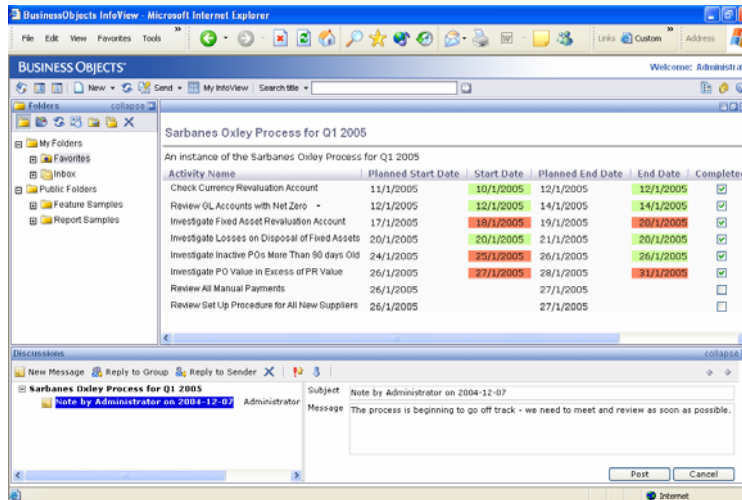

Visually Map Your Business Process

It can be difficult to align BI with a business process if the business process stages are not well defined. Process Tracker helps you visually outline the steps required to consistently follow a business process, such as a cash optimization or brand assortment review. This ensures no activities or steps in the process are missed and the process is followed in a consistent manner.

With each step in a business process, you can link associated reports and analytics for easy access to the key information you require to make informed decisions.

Align Business Intelligence with Business Processes

To ensure the correct analysis and reporting occurs when and where it should in the process, organizations need the ability to communicate throughout the business process. With Process Tracker, you can assign owners for each activity in a process. This allows end users to easily see who the owners and stakeholders are for each activity.

Add commentary to a business process.

Timely execution of each stage or activity in a business process requires a collaborative work environment. Process Tracker lets users add comments to a business process. This makes it easy for process stakeholders to highlight issues and collaborate on ways to resolve them via threaded discussions.

Proactively Monitor a Business Process

Process Tracker gives end users greater visibility into process execution so they can take proactive action. It automatically highlights the status of each step using intuitive color-coded cues. We've also included a check-box feature so end users can indicate when tasks are started and completed on time.

The Best Choice on the Market Today

Process Tracker enables organizations to visually map, track, and communicate a business process through a set of activities and their associated reports and analytics for more consistent, proactive decision making. By offering the first innovative solution to link BI content to business processes, we provide your organization with the extreme insight you need to extend your competitive advantage.
